Since ancient times the gender of a person was determined by what they did and what role they performed in a society and not always necessarily by their biological sex characteristics. Their biological sex characteristic did not always meant having a certain social role. You'll see that transgender humans like we saw with other transgender animals will perform the role and sometimes modify their body to align with the role of the opposite gender.

Being a warrior for example was seen in some societies as an ungendered/unisex/unigender activity, that we'll see when learning about the Scythians and Yoruba.

When we use the word transgender in a historical sense as pioneered by the transgender historian Susan Stryker, she defines the word transgender as quote “people who move away from the gender they were assigned at birth, people who cross over/trans the boundaries constructed by their culture to define and contain that gender”

Transgender is a process that occurs in an specific cultural context and it does not intend to replace or homogenize the indigenous terms that reflect that process and or state of being but aims to be a term that forms a collective of the individuals that is both and or changes from the roles/identities/genders of their specific culture. Also you’ll see that the term transgender doesn’t always work within every cultural context.

This is a video to prove this point. The evil of gender eugenics/binarism, gender specific clothing and treatment and sexism and assigning meaning to sex characteristics, reducing people to sex characteristics wasn't an invention of only white people, that we will see an example of when we learn about the Confucian ideology.

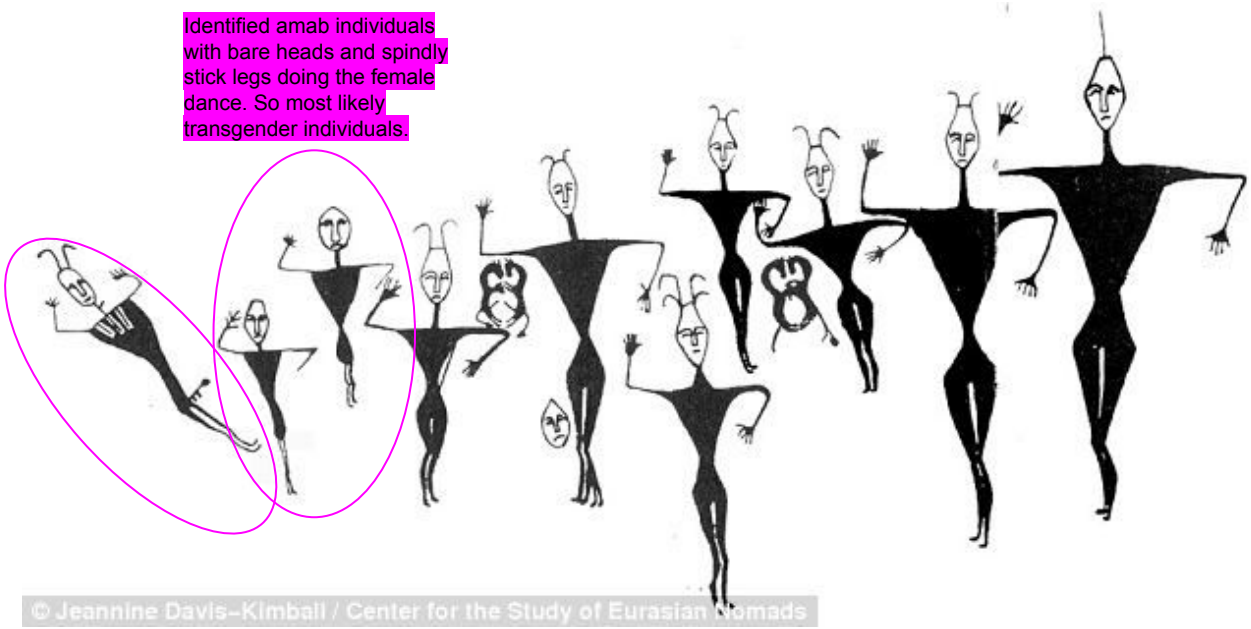
Researchers from the Czech Archaeological Society made an interesting discovery outside of Prague: The **5,000-year-old** remains of a human body categorized as a male body was buried in a ceremonial manner typical of categorized female body individuals, was lying on its left side and its head was facing east. Second, the body was buried with domestic jugs and an egg-shaped pot. The burial is consistent with the way female body individuals were buried. The bodies of men faced west and they were buried with hammers, flint knives and weapons. This human would have lived during the Stone Age's Corded Ware culture, which existed between 2,500 and 2,800 BC.

This led the archeologists to say that this individual represents an example of a third gender/transgender individual. Something very common in various cultures throughout history.
Third gender burials like this are actually very common in archeology particularly in North America and in indigenous religion/animistic/pagan societies.

This discovery was subjected to very bad journalism by media and news outlets that used the headlines “Gay Caveman”, when the original archeologists said nothing of this sort. A more accurate, professional and nuanced journalistic headline would have been “Transgender Stone Age Burial”.

The incredibly explicit images carved in north-west China 4,000 years ago

The Kangjiashimenji Petroglyphs, in Xinjiang, north-west China, depict an intense fertility ritual the likes of which is almost unique in the ancient world.



Identified amab individuals with bare heads and spindly stick legs doing the female dance. So most likely transgender individuals.
© Jeannine Davis-Kimball / Center for the Study of Eurasian Nomads

Kangjiashimenji Petroglyphs: The first scene shows nine massive females, each about two metres high, dancing arond in a circle, while a second transexual figure on the left is partially reclining as if about to fall into a trance

It is believed that the larger-than-life hourglass figures that begin the tableau represent females, with their stylised triangular torsos, and shapely hips and legs. These figures wear conical headdresses with wispy decorations. Males, on the other hand, are depicted as smaller triangles with spindly stick legs, bare heads and mainly erect penises - dubbed 'ithyphallic' in archaeology speak.

Many of the figures appear to depict transexuals combining both male and female features. Ithyphallic but wearing female headgear and chest decorations, they sometimes also wear masks and may depict shamans.

'In general, the figures are represented in a dance so intense that some have fallen into a trance or state of ecstasy,' writes Dr Davis-Kimball.

'It wears a female headdress with antenna and a “bra” ...' writes Dr Davis-Kimball. 'Although its torso and legs are stylized as the male and it is ithyphallic.

It is the second scene identified by Dr Davis-Kimball that appears to show the wildest orgy of all. In it sixteen figures - 10 female and six male - look set to begin having sex, with one particularly unusual one on the left wearing a monkey mask and probably representing a shaman.

'As it is ithyphallic it is also a bi-sexual representation and it appears that it about to copulate with a small female with splayed legs whose vulva is explicit,' she writes, or it could be an anal penetration of an amab individual. Next to it is a headless male who looks like he's trying to have sex with another transexual figure. The transexual figure doesn't have an explicit vulva.

At the centre of the scene is another prominent transexual figure who appears about to have sex with a smaller female with splayed legs, whose private parts are quite explicitly rendered.

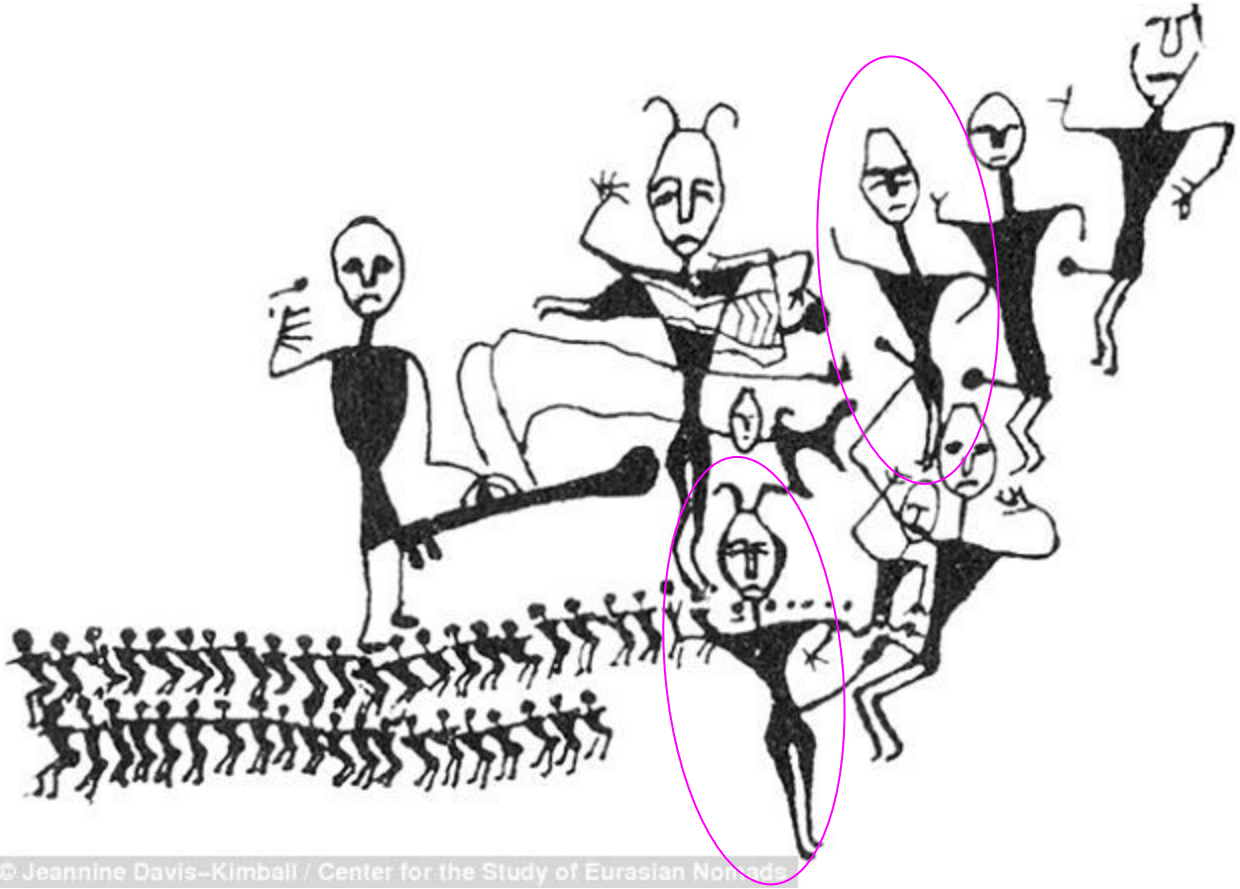
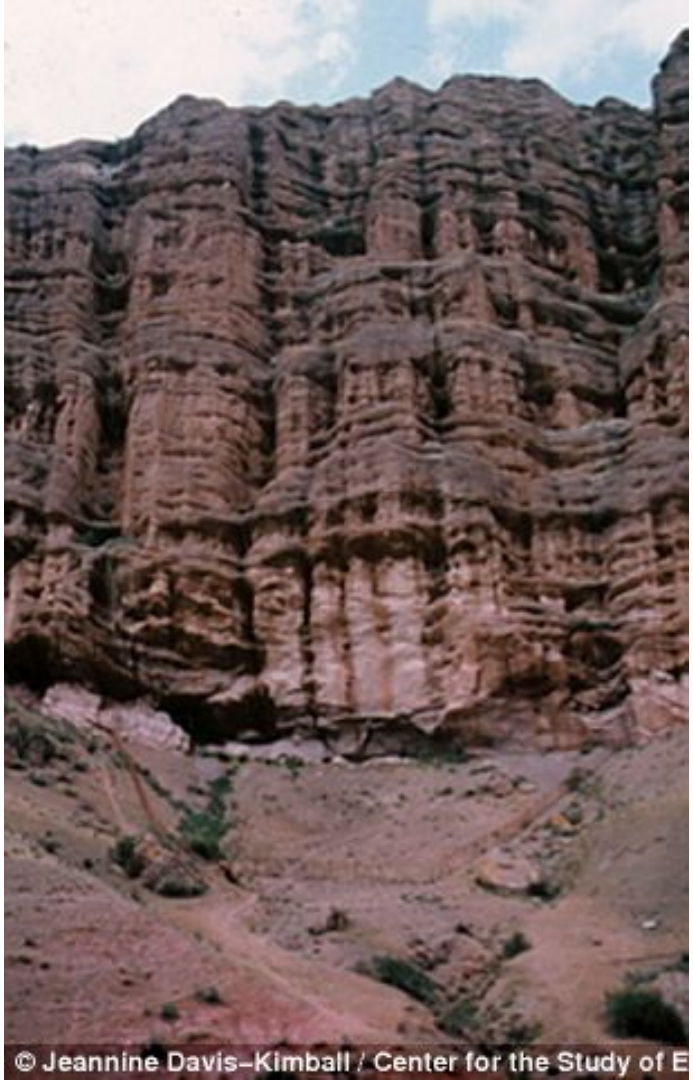
https://www.advocate.com/society/culture/2013/02/18/worlds-oldest-petroglyphs-show-bisexuality

Hermaphrodite figure with 2 heads and 4 legs one pair of legs with shapely hips and legs (female) and the other pair of legs are spindly stick like with an erect penis (male).



Transsexual figures with shapely hips and legs and with an erect penis.



Location: The petroglyphs are carved in bas-relief in a sheltered grotto at the base of this red-basalt outcrop in Tien Shan, in Xinjiang, west China

Archaeologists discover a 3000-year-old stone slab that is breaking ancient ideas of gender

Researchers dug up a 3000-year-old stela in southern Spain that challenges gender stereotypes and dynamics.

The discovery of this large 3000-year-old necropolis with funerary monuments for ancient burial mounds, stone cists and cremation pits in Huelva, Spain, has allowed the universities of Durham, Seville, Huelva and Southampton to broaden their knowledge of stelae. According to El Pais, this stela "throws into question previous interpretations of the gender of the figures represented in the stone slabs, since those with motifs around the head of the figure had traditionally led to interpreting the figure as female, while thus one clearly shows male genitalia."

Archaeologists have uncovered an unusual stone slab during excavations at Las Capellanías, a 3,000-year-old funerary complex in southern Spain.

Found alongside cremated human remains, the slab—also known as a stela—depicts an individual wearing a headdress and necklace, two items researchers typically associate with women. The figure also has two swords, which are often associated with men, as well as male genitalia.

1. Neolithic Trans Goddess Doll - Somerset Museum

Image Credit: The Glastonbury Idol at The World of Stonehenge exhibition. Photo by Kit George Art

This awkwardly shaped carving from around **2500 BC** was found plonked upside down in the Somerset marshes and no one can quite figure out why, but it definitely wasn't discarded as it looks like it was placed *with purpose*.
It show us that neolithic people understood being intersex & trans long before most media seems to think we sprung up out of the ground in 2015 and hadn't existed before. She was likely a goddess of that local area, probably of water & death/dying as the swamp is a ~liminal space~ and if i was living in 2500 BC I'd probs think the swamp was a bit deadly too. She could also have been an ancestor and this could be a form of ancestor worship.
She's made of Ash which is a material often linked to creation of the first humans by the germanic god Wodin. I'm here for a germanic god being the creator of the tgirls, but it could also be a depiction of Wodin and so Wodin could have been a divine tgirl, God could be a trans woman after all!
We really don't have much info on her so this really is wide open to interpretation of who she is, but her intersexness and transness are undeniable.
The Figure was recently on display at the British Museum for their The World of Stonehenge exhibition, and is on long term loan to The Museum of Somerset.
